

ICE DIVER SPECIALTY

The purpose of the PADI Ice Diver Specialty course is to familiarize divers with the skills, knowledge, planning, organization, procedures, techniques, problems, hazards, and excitement of diving under ice. The Ice Diver Specialty course is intended and designed to be a safe, supervised introduction to diving under ice. Training should emphasize FUN (hot tub) and safety (tethered). The goals of the PADI Ice Diver training are:

- A. To enable the student to explain the planning, organization, procedures, techniques, problems, and hazards of diving under the ice.
- B. To familiarize the student with the use of special equipment, safety line, communications, line tending, and line securing techniques and procedures
- C. To enable the student to engage in dives to explore ice environments found within depths and conditions as good as or better than those in which they have been trained safely and enjoyably.

Common Reasons for Ice Diving would include Adventure, access to dive sites year round in colder climates, search and recovery of lost objects, Photography, Much better visibility and a very SHORT surface swim.

Wreck Diver, Cavern Diver, Cave Diver, and ICE Diver is all over head environments; these types of Diving are all interrelated. Train now and enjoy the Diving of a lifetime.
